

Currently accepts any standard 5" K-style gutter found on the majority of homes.

Most homes in North America use a standard 5" K-Style gutter system, and although there are universal gutter mount sprinklers on the market, none are as secure with the same ease of deployment as the Gutter Lock Sprinkler made by Defender Fire & Safety Inc. through decades of experience in the wildfire industry we have noticed an increase in the severity and frequency of wildfire activity in the wildlandurban environment pushing us to develop something that a homeowner or professional can put on a structure with little to no training. Easily put up and taken down from the ground with a pole utilizing a fast threading machine screw end there is no need for a ladder, adding an increased level of safety.

# Gutter Lock Sprinkler

The biggest thing that separates the Gutter Lock Sprinkler from our competitors is that it firmly attaches to an eavestrough and stays attached during heavy winds and high pressure operations. Our bracket is built out of the toughest plastics available containing a UV resistant polypropylene similar to a F35 fighter jet cockpit and uses all metal hardware. Our sprinkler head is also a common 1/2" impact sprinkler rather than the plastic varieties for optimal coverage and longevity.

Wear and tear happens, if a piece of our sprinkler breaks it is built modular so you can replace the broken piece and reassemble rather than replacing the entire unit!

Proprietary gutter lock mechanism holds sprinkler firmly in place.
