

Wildcat Fire Service Inc. "Defender" is a multi use portable water pumping solution for anyone that requires a mobile pump without a water source. This is a self contained unit with a hose reel pre-loaded with 100' of 150PSI rated 5/8" hose and a brass nozzle. Gear storage was also considered with a top shelf made out of aluminum with a soft edge cap along the rim. 1 piece of hard suction hose with a foot valve and 1 50' length of 1" forestry hose also included with this package. All of this powered by a 10HP 301CC GX270 4-stroke engine with a single stage 115PSI maximum pump head capable of a maximum flow of 150gpm under no pressure in open ended flooding situations. The pump is powerful enough to self load so we have plumbed in a valve to be able to accept the hard suction hose supplied to self load at a water source eliminating the need for a secondary trash pump to fill.

The trailer is built from .110 wall 2x2 square steel tubing with the outside frame being notched and bent from 1 single piece to improve strength and durability. The steel parts are all powder coated for durability and rust prevention. It all rests on a 2,000 lb axle with 4 bolt 4B.C. hubs, 1 1/16" bearings and 1,750 lb 4 leaf springs. For versatility we have put a 2" standard ball hitch on these units with 18.5X8.5-8 tires rated at 970 lbs each.
